

Tips on Keeping Your Computer Healthy

We hope you are getting a byte or two out of your computer each day. Here are a few tips on prolonging the life of your software.

Clean Your Disk Drives

Cleaning your disk drives takes only a few minutes and makes them work better. Clean your drives every second week.

Get Your Drives Tuned

A majority of disk problems are caused by misaligned disk drives. Your most valued software could be damaged. So protect your investment—get your **drives aligned** and **speed adjusted** at least twice a year at your dealer.

Protect Your Computer's Power

Computers like a steady power supply. However, large appliances or equipment send spikes down a power line. These power spikes cause memory glitches and can alter software if you were writing to the disk when a transient happened. A surge suppressor such as a Blitz Bug will prevent power surges. At \$25 to \$50, they are a good investment.

Follow these tips and you will probably never have a problem with your software. Our experience has been that at least 97% of reported software problems are caused by unmaintained computers. Your dealer is in business to support you. If you have any questions, go see him, he will be happy to help you.
